

Blackmore *Micro Greens* Sower/TopCoater

The perfect solution for laying down a uniform layer of seed and covering media

Growers love the Blackmore MicroGreens Sower/TopCoater

The Blackmore TopCoater is an economical unit that MicroGreens producers are finding is the perfect solution for their need to lay down a precise and uniform layer of seed from smaller herbs to large seeds such as peas and sunflowers. The small hopper holds and precisely dispenses seed and the larger hopper spreads an even layer of covering media. Simply turning knobs to adjust vibration and tilt determines the rate at which seed or media is dispensed. The conveyor belt is also variable speed up to 1200 trays/hour. A counter keeps track of number of trays sown. The optional seed feeder shown keeps a constant amount of seed in the smaller seed dispensing hopper. Reduces labor cost and improves the quality and uniformity of seed sowing. A 4 ft version with the sowing hopper only is also available.

[See a short video clip of the machine in operation on the Blackmore web site movie page](#)

Power - 120 VAC 50/60 Hz

Media Hopper capacity – 4 cu ft (113 Liters)

Length - 7 ft. (2.1m)
