

BLACKMORE DRIBBLER with WIPER attachment for ELLEPOTS™, Baskets, Combo Planters

The Blackmore DRIBBLER/WIPER automatically clears excess soil away from the tray and machine when drilling for Ellepots™

The unique Blackmore DRIBBLER with WIPER makes it easy to prepare Ellepots™ or loose-fill containers for transplanting or sowing. The special drilling head makes oversized holes to accommodate Ellepots™ for larger Step-Up sizes such as the 288, 162, or 105, or for sowing larger seeds such as cucumber. A special Wiper Attachment mechanically clears excess soil away from the tray and the machine on every cycle.

There is also a “universal” plate that allows “drills” to be repositioned for drilling loose-fill baskets, combination planters, etc. Plant spacing and depth are uniform for less stress, a better quality crop and quicker turn. And your planting line runs faster with fewer people as plants are simply dropped into the pre-drilled holes.

The machine runs on 120 VAC and is easily installed inline for efficient operation. The following components make up the machine: **Dribbler Chassis, Power Conveyor, Wiper attachment and Drill Plate.** [SEE A SHORT VIDEO OF THE MACHINE IN ACTION ON THE BLACKMORE WEB SITE MOVIE PAGE](#)
